DETAILED ACTION

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-13, 20-25, and 29 are rejected under 35
 U.S.C. 103(a) as being unpatentable over Berry (U.S. 4,414,970)
 in view of Miller (U.S. 5,840,632).

Berry teaches the use of an elastomeric film on a fabric substrate in a personal care article with one embodiment of the film being permeable and microporous (col. 2, lines 40-55).

Miller teaches the formation of microporous elastomeric films, which may be comprised of styrenic tri-block polymers by the use of blowing agents (col. 4, lines 30-60). The instant invention claims the use of a microporous permeable film on a fabric substrate where the film has been made by use of a blowing agent and may comprise styrenic tri-block polymers. It would have been obvious to one of ordinary skill in the art to have made

Application/Control Number: 09/474,043

Art Unit: 1772

the porous elastomeric films of Berry using blowing agents and styrenic block polymers because of the teachings of Miller that a blowing agent and these materials can be used to produce porous elastomeric films.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 4. Claims 1-13, 21 and 29 are rejected under 35 U.S.C. 102(a and e) as being anticipated by Miller (U.S. 5,840,632).

See col. 4, lines 30-60. The reference teaches elastomeric films made with blowing agents.

5. Claims 26-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berry in view of Miller as applied to claims

Application/Control Number: 09/474,043

Art Unit: 1772

1-13, 20-25 and 29 above, and further in view of Shah et al. (U.S. 5,786,412).

Berry in view of Miller teaches an elastomeric microporous film on a substrate as noted above. Shah et al. teaches the use of polyurethanes to made elastomeric films as well as styrenic triblock polymers. The instant invention claims a polyurethane based elastomeric foam. It would have been obvious to one of ordinary skill in the art to substitute polyurethane for the styrenic components of Berry in view of Miller because of the teachings of Shah et al. that polyurethane makes a layer similar to that of styrene based elastomers.

6. Claims 14-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berry in view of Miller as applied to claims 1-13, 20-25 and 29 above, and further in view of Cheong (U.S. 5,571,529).

Cheong teaches the use of various topical medicinal substances in a foam layer that is in contact with skin (col. 3, lines 50-65). The instant invention claims the storage of and release of various active agents in a microporous elastomeric layer. It would have been obvious to one of ordinary skill in the art to have used a topical medicine or other active

Application/Control Number: 09/474,043

substance in the microporous bandage layer of Berry in view
Miller in order to deliver an active substance to a user's skin
layer because of the teachings of Cheong.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 703-308-2420. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time. The examiner returns all calls within one business day unless an extended absence is noted on his voice mail greeting.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 703-308-4251. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0651.
